**DermOne Dermatology, Cosmetic and Scarless Vein Center Vascular  
Ultrasound Laboratory receives Vein Center accreditation by the IAC - First  
and only vein center in North Carolina to receive honor**

**FOR IMMEDIATE RELEASE**

Date: February 2015

**Wilmington, NC** - The Vascular Ultrasound Laboratory of DermOne Dermatology, Cosmetic and Scarless Vein Center has received Vein Center accreditation by the IAC (Intersocietal Accreditation Commission). This honor represents the highest standard of excellence and its accreditation is reserved for the most esteemed vein centers in the United States. As the first and only vein center in North Carolina to receive this honor, DermOne Scarless Vein Care by Kamran Goudarzi, MD, PA joins the ranks among 27 other elite facilities in the country.

*“This is the utmost honor to be accredited by the body who holds the highest standards in evaluating vein centers in the US. For our Wilmington, NC facility to have met these requirements, it is truly a tremendous distinction,”* said Dr. Kamran Goudarzi.

More than one half of Americans age 50 and older are affected by varicose veins. Varicose veins occur when the valves in the leg veins no longer function, causing blood to pool in the legs. In some cases, this condition progresses to a more serious form of venous disease called chronic venous insufficiency (CVI).

Whether to relieve symptoms and/or improve appearance, treating varicose veins can be performed by vein centers that specialize in the evaluation and

management of superficial venous disorders. There are many facets that contribute to a positive patient outcome; successful treatment of the venous disorder, the training and experience of the vein specialist performing the procedure, the type of equipment used and the quality assessment metrics each facility is required to measure.

Dr. Kamran Goudarzi was one of the first physicians in the nation to receive board certification in Phlebology and has consistently implemented the newest technologies as they have become available. He is considered a pioneer in treating venous disease, and since the introduction of intravascular laser ablation, Dr. Kamran developed his own technique which is regarded as one of the preferred methods for the treatment of varicose veins. His practice was one of the first centers in the state of North Carolina to offer this technology to patients, which has taken surgery from the operating room to the office setting.

Accreditation by the IAC means that DermOne Dermatology, Cosmetic and Scarless Vein Center's Vascular Ultrasound Laboratory has voluntarily undergone a thorough review of its operational and technical components by a panel of experts. IAC accreditation is granted only to facilities found to be providing quality patient care, in compliance with national standards through a comprehensive application process including a detailed review of selected patient procedures.

IAC accreditation is a "seal of approval" that patients can rely on as an indication that the vein center's processes and procedures have been carefully evaluated by medical experts in the field of treatment and management of superficial venous disorders, and is an accreditation that is widely respected within the medical community, as illustrated by the support of the national medical societies related to superficial venous disorders, which include physicians, physician extenders, nurses and ultrasound technologists.

DermOne Dermatology, Cosmetic and Scarless Vein Center is located at 6752 Rock Spring Road, Suite 200 in Wilmington, NC. Learn more about their treatment options and procedures at <http://dermonenc.com/>.
